

Our World

How did our world become
the beautiful world that it is?

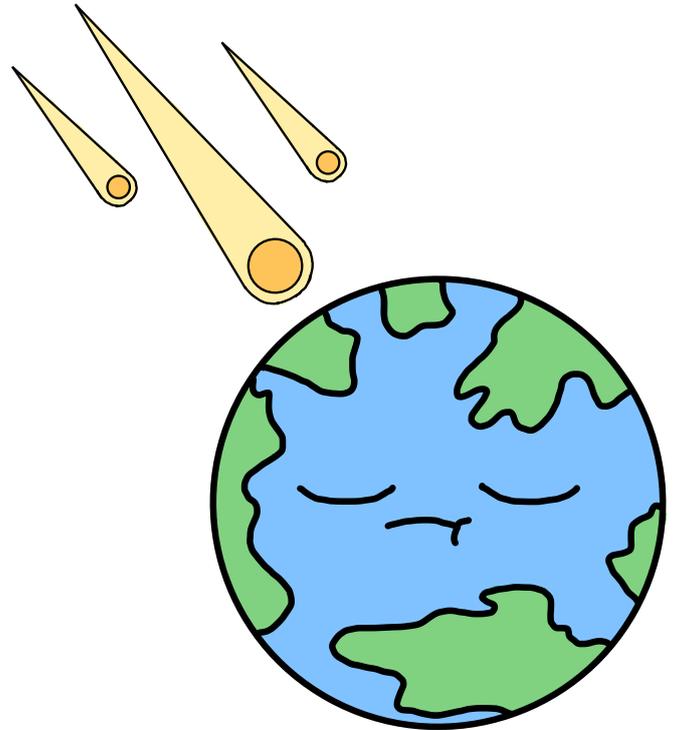

Well, it all began as just
rocks and dust...

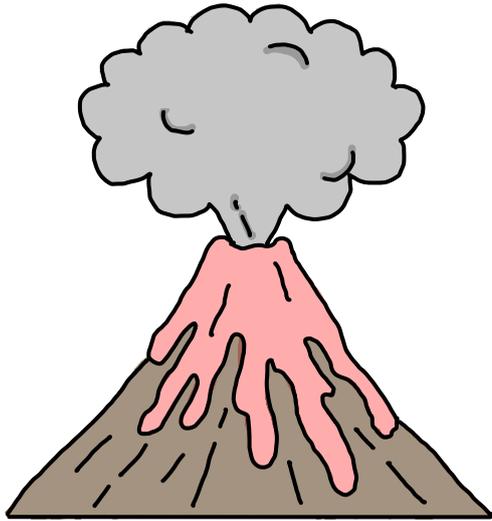

Until it all came together
with gravity.

But it wasn't ready yet
because of...

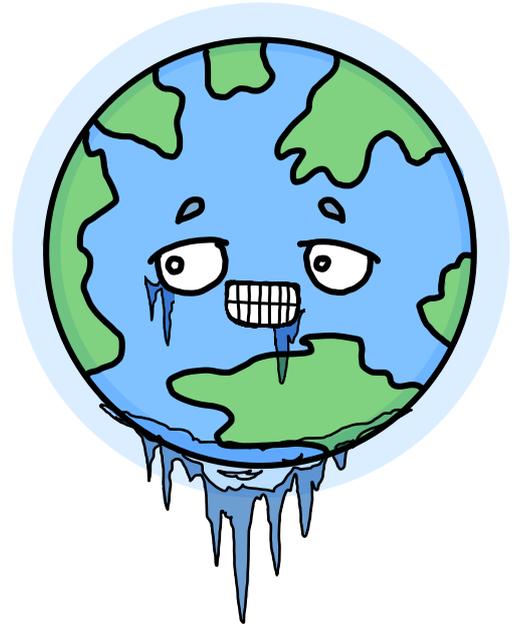

Meteor showers...

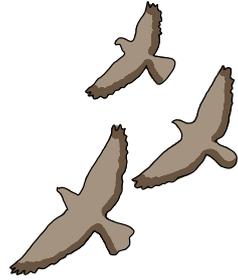

Volcanoes...

And ice ages...

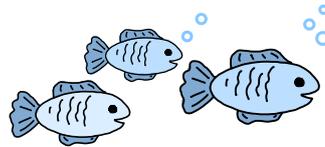

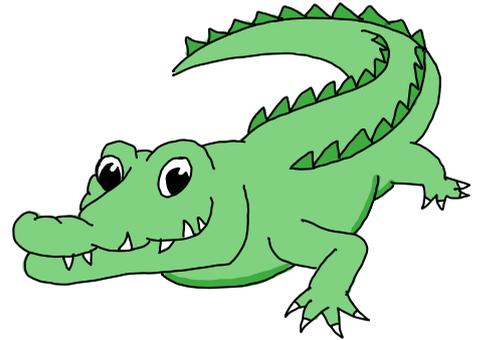

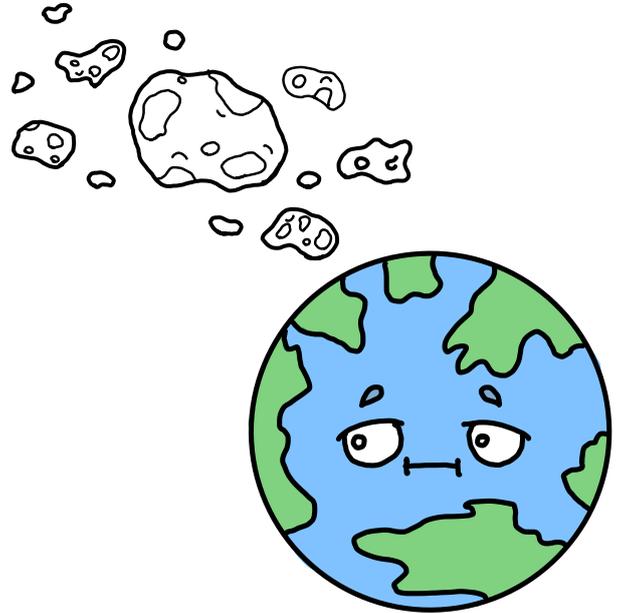

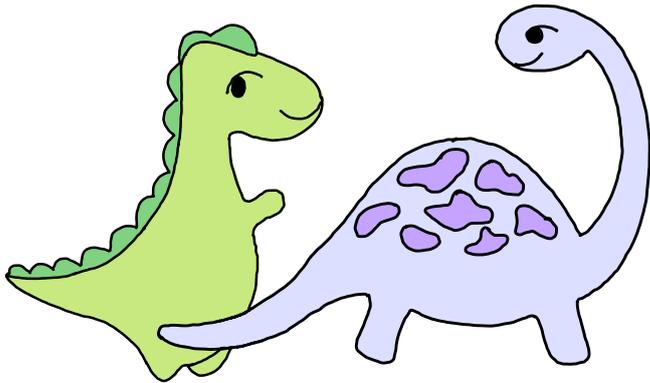

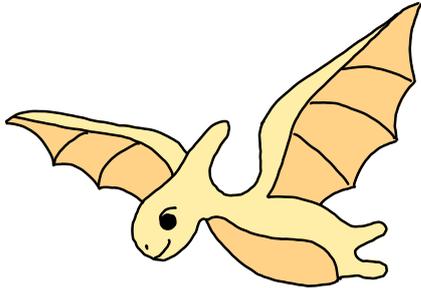

Then, plants suddenly formed...

And animals!!!

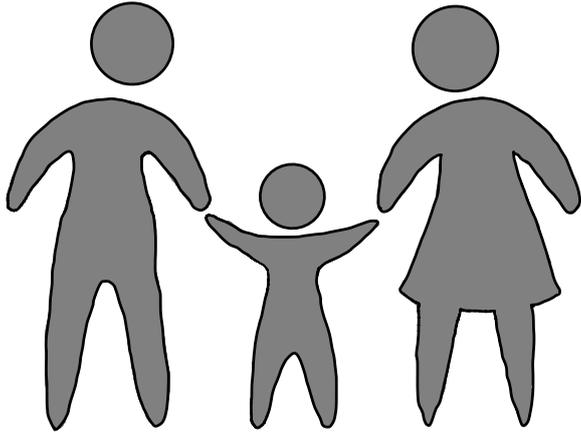

And even dinosaurs!

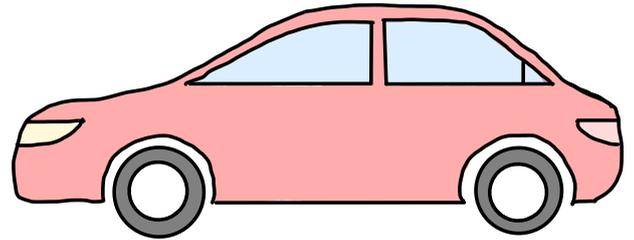

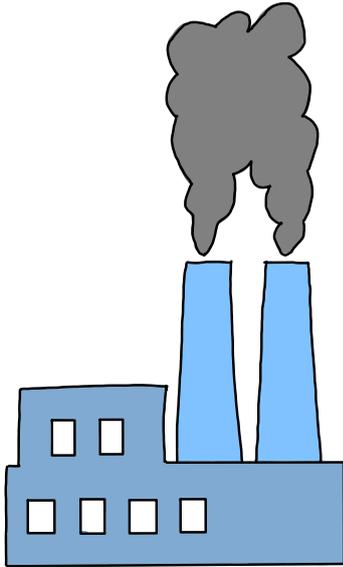

But asteroids came and wiped them all out.

After 250 million years,
humans appeared

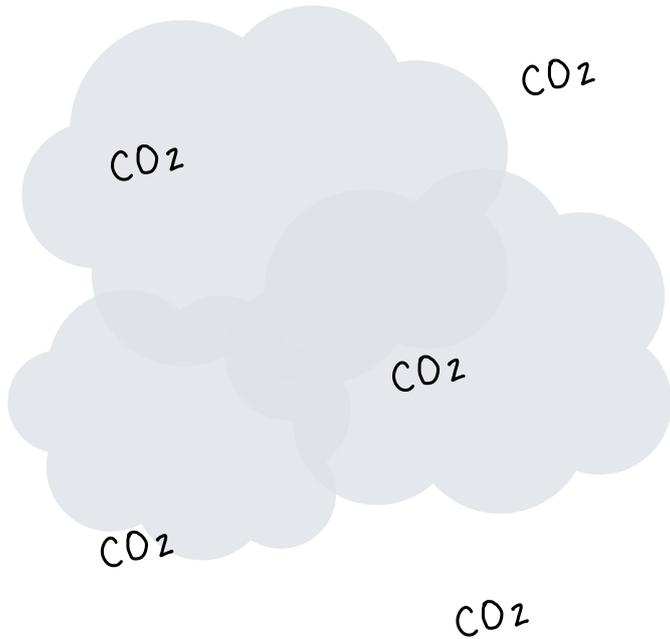

And the earth was happy!

The earth stayed happy, until humans began to industrialize and build factories...

And cars...

And emit an abundance of CO_2
into the atmosphere.

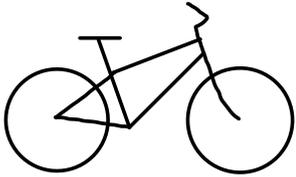

CO_2 hurts the earth, making
it unhappy.

In the last 200 years, the state of our world has only become worse.

There's too many emissions, too much of a consumer mindset, and not enough materials to sustain the population.

We must do what we can to make our world happy again.

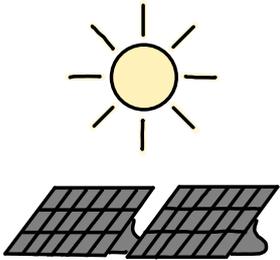

Some ideas to help...

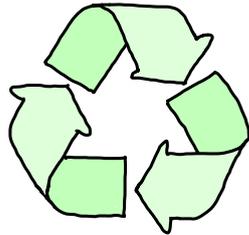

Biking

Walking

Solar panels

Recycling

What else can you do to help our beautiful world be happy?

Thank
— you!!!
